AIR OASIS AIDS IN THE BATTLE OF H1N1 FLU (SWINE FLU)

Mexico turned towards Air Oasis for Help

Air Oasis sent out a number of Air Oasis air purifiers to a dealer meeting with the Mexican government to aid in the battle against the H1N1 Flu (Swine Flu) pandemic. According to the CDC, as of today there are a total of 109 confirmed cases and 1 death in the United States.

"They are certainly convinced our units will help. That's the first of a possible government project down there. Our representative informed me that they will be meeting with Mexican health officials," Dr. Jeff Bennert, Ph.D., C.T.N. of Air Oasis stated. Dr. Bennert went on to say, "It is important to do something quickly." University studies have shown their technology to be effective against viruses and they feel very confident that their products will be effective in fighting most known pathogens including the H1N1 (Swine Flu). All Air Oasis studies are conducted by Dr. Nabarun Ghosh, Professor of Biology and Environmental Science, of West Texas A&M University.

Air Oasis is an air purifier manufacturing company located in Amarillo, Texas. The business began in 2002 and has been distributing products worldwide ever since. Their patent pending technology is what sets them apart from all the others; they are The New Generation of air purifiers.

If you would like more information on this topic feel free to call Jon Bennert, President of Air Oasis, at 1-800-936-1764 ext 104 or Dr. Jeff Bennert at ext 102.
