

BI-POLAR[®] ICE

The Cold Hard Facts...

Keeping ice machines free of:

- Slime
- Sludge
- Yeast
- Mold
- Viruses
- Bacteria

Bi-Polar[®] Ice features:

- No ozone
- No mercury
- No glass
- Energy efficient
- Low maintenance
- Easy installation
- 100% Made in America

Available in 2 Voltages:

- 110 Volt
- 220 Volt

BI-POLAR[®] ICE

The Bi-Polar[®] Ice creates cold plasma discharge which consists of positive & negative ions from water vapor in the air. When positive & negative ions attach to yeast & slime, the hydrogen is removed, the DNA is damaged and the pathogen cannot reproduce.

When the ions land on the outer shell of a mold, bacteria, or virus, DNA/RNA is damaged and the pathogen cannot reproduce. This is the same process which occurs with yeast and slime.

Positive and negative ions attack odors and harmful VOCs on a molecular level converting them into harmless atmospheric gases, such as oxygen, carbon dioxide and water vapor.
