

The G3 Series

Effective, Quiet Air & Surface Purifiers

Single-room air purifiers with three technologies to eliminate contaminants.

The G3 Series air purifier and surface sanitizer is filterless and virtually maintenance-free. Its advanced air ionizer technologies reduce up to 99% of allergens, odors, mold, germs, and other contaminants.

1000G3 for small and medium rooms

3000G3 for larger indoor spaces

G3 Series Benefits

Remove Allergens

Breathe easy knowing up to 99% of airborne dust, dander and pollen have disappeared.

Eliminate Odors

Get rid of up to 99% of unwanted odors and volatile organic compounds (VOCs) and smell the freshness.

Clean Air

Air Oasis technology reduces mold, viruses, and bacteria in the air and on surfaces by 99%.

Simple Yet Effective

Elegantly designed to be an inconspicuous element of your healthy lifestyle.

The G3 series air purifier and surface sanitizer blends in nicely with household décor. And it delivers a powerful punch to unwanted contaminants.

The G3 series effectively and safely addresses unwanted contaminants such as allergens, mold, mycotoxins, bacteria, viruses, VOCs and odors.

The G3 Series

Simple, Elegant Air & Surface Purifiers

Three Advanced Technologies

The G3 series turns water vapor into decontaminating ions.

Widely used in schools, businesses, hospitals and government agencies, this technology is also available for your personal home and office use. NASA initially researched PCO. We advanced that technology with our proprietary AHPCO with germicidal UVC.

We then added bi-polar ionization. Together, the ions emitted travel throughout the air and are highly effective at ridding air and surfaces of unwanted contaminants. Mold, viruses, bacteria, odors, VOCs, and allergens are reduced to trace levels.

Proven Technology

From the toughest odors to the most resilient bacteria, Air Oasis is pioneering the leading technology solutions.

"I know of no other technology available that produces the high level of pathogen abatement as Air Oasis air purification units." -Professor N. Ghosh, Ph.D.

Test results exhibit up to a 99% reduction in H1N1, legionella pneumophila, aeroallergens, mold, bacteria, viruses, and formaldehyde.

Microflora & Propagules Reduction Study: Almost complete reduction of microflora and propagules at 5 distances.

Addresses Mold Related Issues

Physicians treating mold-related illnesses purchase our products in support of their patients.

While mold is a naturally occurring fungus with valuable properties in nature, we don't want it in our homes or offices. Whether you're battling nuisance surface mold in your bathroom or dealing with chronic mold-related illness, the G3 series has reduced up to 99% in laboratory studies.
